

ACTING ON **GDPR**

GDPR comes into force May 2018

Four years in the making, the General Data Protection Regulation (GDPR) is the new EU legislation that will come into effect from May 2018. It builds on the previous EU directive, which has not changed since 1995 and is now deemed outdated.

The good news is that, with the introduction of GDPR, most of the complexity around understanding the various data protection regulations in Europe will be cleared up. Furthermore, GDPR is preparing for a new era now defined by cloud, mobile, social, big data and an increased exchange of data across national borders. In essence, GDPR affects all companies that process the personal data of EU-citizens. This also extends to companies that process data of EU citizens without having a physical presence in the EU.

ARE ORGANISATIONS **PREPARED?**

In 2017 there has been a proliferation of articles, covering GDPR. Most have echoed similar points about the need to prepare and what impact GDPR will have on organisations of all sizes. However, despite this, it would appear that many organisations are still not prepared or indeed preparing.

For many organisations, the hardest part is getting started. Although GDPR builds on the existing Data Protection Act, it's a sizable and daunting piece of legislation. But with closer regulatory oversight anticipated, it's important to get going now.

How can Core to Cloud and Nuix help?

Data is at the heart of the GDPR. Put simply, you can't protect or manage data that you don't know you have or what it contains. Together Core to Cloud and Nuix can help you to better understand and categorise your data. In particular we can help with:

Data Transparency: With hooks into large number of platforms and capability to extract content and meta-data from thousands of file formats, Nuix can be used to help you better understand your legacy information assets to give you a starting position from which to determine how best to manage that data in accordance with GDPR and other business requirements.

Nuix can provide a level of transparency so that you can make informed information governance decisions and enable you to answer the "who, what, where, when, why" questions you may have of your data. With Nuix, you are also able to apply classification to the data for security categorisations, clean-up and undertake remediation exercises, you can also undertake migrations or apply other business taxonomies onto the data. Nuix also has proactive governance probes which hunt for specific types of information such as personally identifiable information or other sensitive data.

Subject Access Requests: Nuix can also be used to assist in the management of subject access requests (SAR), providing comprehensive processing and search capability across various data sources as well as advanced filtering and culling techniques to collapse data volumes to a smaller and more relevant subset.

Nuix's workflow also provides automated bulk redaction as well as manual redaction and imaging and export workflows for creating a package of data relevant to the SAR to collapse the time and costs associated with dealing with such requests. The system is also fully audited to enable you to prove a complete and rigorous process and allows the recording of comments and other information to ensure a fully defensible position in case of dispute. The same solution can also be used to help with right to be forgotten, right to portability and responding to other regulatory requests.

WHY IS THIS IMPORTANT?

Organisations already face challenges when dealing with Access, Portability and Right to be Forgotten requests due to inefficient, costly and often manual processes. These challenges will only get worse as the GDPR affords more rights to the data subject over and above the DPA due to the following:

- **Increased volume** - Current £10 fee per request is being removed which will open the flood gates to more requests, meaning more efficient ways of dealing with these will be required.
- **Reduced timeframes** - Current disclosure deadline of 40 days is being reduced to 30 days
- **Increased complexity** - Under DPA the Right to be Forgotten is limited to cases where processing causes substantial damage or distress. Under GDPR this threshold is removed.
- **Right of Portability** - If the individual requests it, you must transmit their data directly to another organisation, if this is technically feasible within 1 month.

Why Core to Cloud?

Core to Cloud delivers solutions that help organisations to discover, defend and respond to the latest security threats on the horizon and to also ensure compliance. We bring highly disruptive security and cloud technologies, like Nuix, to market. As a business we look at the bigger picture, working hard to understand the business requirements and objectives, to analyse your particular pain points, aligning technology solutions to your specific needs.

Our Unique Approach

We understand that it can be relatively straightforward to establish where you want to go, but much harder to set the wheels in motion to get you there. Here at Core to Cloud we take you on a journey whether that means recommending a point solution, or looking more holistically at your overall security requirements.

Vendor Independence

We pride ourselves on being a different type of solutions provider. Not only do we have depth of industry experience and a strong focus on security, compliance and all things cloud, but we are vendor independent. This means the only agenda we are working on is yours.

Discover, Defend, Respond

First, we take the time to understand your security drivers, then we challenge constructively and stress-test robustly to ensure all is thought through. So whether you are looking for penetration testing and understanding how intruders approach your network, or whether you are looking to understand, find and secure your data and perimeter, or even if you are looking to secure applications, devices and provide incident response – we've got it covered!

Secure Cloud

From core on-premise IT security and infrastructure to best-of-breed cloud technology, we design and deliver industry leading, enterprise level solutions. We offer one point of contact for UK-based support across all services 24/7/365. We recognise that one size does not fit all, and we work with clients to design bespoke IT solutions.
